Basics principle of Integrated Pest Management: Consideration of Ecosystem, Pest surveillance, Utilization of Economic Threshold Level (ETLs), Application of minimum selective hazards, Advantages of Integrated Pest Mngement ( Fits better in National Economy, More efficient & Cheaper methods, Avoid upsetting the balance of nature, Minimises residue hazards of pesticides)

### UNIT 2

History of Integrated Pest Mangement and successful control of pests with the help of chemical and biochemical pesticides, IPM and its evolution: Over the years IPM underwent several changes in its focus and approaches. Some of the key approaches are Damage threshold -The basic IPM principle relied on the damage boundary, economic damage relationship

### UNIT 3

Widespread pest resistance in 1950's to DDT and other Pesticides Environmental Awareness during the 1960s - new awareness of ecology and the environmental impact of pesticide pollution resulted from a public outcry about environmental contamination found in the air and foul water found in rivers and streams.

### UNIT 4

Ecological Engineering explores the ecological engineering strategies based on the management of habitat to achieve pest suppression. Selected IPM strategies and prescription, minimize negative impacts to non-targeted organisms

### UNIT 5

Tools of Pest Management: Available techniques for controlling individual insect pests are conveniently categorised in increasing order of complexity as -

1. Cultural
2. Mechanical
3. Physical
4. Biological

1. Identification of common natural enemies of crop pests (parasitoids, predators, microbes) and weed killers. Identification of biocontrol agents, different predators and natural enemies
2. Visits (only where logistically feasible) to bio-control laboratories to learn rearing and mass production of egg, egg-larval, larval, larval-pupal and pupal parasitoids, common predators, microbes and their laboratory hosts, phytophagous natural enemies of weeds.
3. Field collection of parasitoids and predators. Hands-on training in culturing, identification of common insect pathogens. Quality control and registration standards for biocontrol agents.
4. Assessing pest status in dwellings (labs, canteen or hostel), implementation of pest control against flies, mosquitoes, bed bugs, cockroaches and rodents. Pre- and post-construction termite proofing methods, control of silverfishes in the library.
5. Evaluation of commercially available domestic insect pest control products through bioassays.
6. Calculations on the doses of insecticides application technique.
7. Identification of different types of damage. Identification and study of life cycle and seasonal history of various insect pests attacking crops and their produce: (a) Field Crops; (b) Vegetable Crops; (c) Fruit Crops.
