After the first year of the new system, the average number of children per family was 2.5, compared with 3.2 in 1960. The rate of natural increase was 1.5 percent in 1961, compared with 2.5 percent in 1960.

The government's new policy has been welcomed by many business leaders, who see it as a way to encourage investment and job creation. However, some critics argue that the policy is too generous and could lead to a loss of tax revenue. The government has responded by saying that the policy is designed to stimulate economic growth and create jobs, and that it will be closely monitored to ensure that it remains fiscally responsible.

and the other two were the same as the first. The last was a small, dark, irregular mass, which I could not identify.

Dr. Jean-Pierre Gobin is Vice-President of the World Bank's Sustainable Development Network. He has been involved in the development of environmental and social management systems for over 20 years. He has worked in developing countries in Africa, Asia, Latin America and the Caribbean, and has also worked in the United States, Japan, and Australia. He has been an advisor to the World Bank on environmental issues and has advised governments and international organizations on environmental management systems. He currently serves as Vice President of the World Bank's Environmentally Sustainable Development Department. He is also a member of the World Bank's Executive Committee and the Board of Directors of the World Bank Group. He is a member of the World Bank's Executive Committee and the Board of Directors of the World Bank Group.

The sustainable development of the world's environment and its natural resources is one of the most pressing challenges facing humanity. The World Bank is committed to helping countries achieve sustainable development by addressing key issues such as climate change, biodiversity loss, and resource depletion. The Bank's work focuses on developing policies and programs that promote sustainable development, including the use of renewable energy sources, the reduction of greenhouse gas emissions, and the protection of natural resources. The Bank also works to support the development of sustainable infrastructure, such as clean water and sanitation systems, and to promote sustainable agriculture and forestry. The Bank's work is guided by the principles of sustainable development, which aim to ensure that economic growth is achieved in a way that respects the environment and the needs of future generations. The Bank's work is guided by the principles of sustainable development, which aim to ensure that economic growth is achieved in a way that respects the environment and the needs of future generations.

JOHN D. REEDMAN

Message

Tourism is an innovative and dynamic industry with strong prospects for future growth. It is an industry that will continue to play an important role in the Indian economy, attracting investment and creating jobs in both our cities and our regions.

It is important however that we build and merely expect success. We need to comprehend and capitalize on emerging opportunities and capture the benefits of the major drivers of industry including rapid mobile advances in technology.

In tourism marketing, distribution and supply chain, a technological revolution is taking place that is as profound as it is exciting. In both the international and domestic tourism sectors, the internet is being used increasingly to research, purchase, book and pay for tourism products and services. It also has the potential to deliver significant benefits in key tourism markets by improving the efficiency in supply chains.

The internet is not just a powerful business tool. It shows all the signs of becoming a household utility as increasing number of Indians become regular users. Furthermore, with the spectacular growth of tourist places and a national rollout of 95 regional networks, a growing proportion of overseas visitors to India will be using online technology to research and purchase tourism products and services.

Indeed, getting the tourism industry online is an issue of national importance. If the industry is to continue to be internationally competitive, it must take advantage of the enormous potential provided by advances in information technologies.

Accordingly, we need a coordinated, national approach to harnessing the benefits of and reducing the impediments to the effective and efficient use of the internet by the tourism industry. In my view, this requires policy intervention to maintain the free market prices and will generate large scale employment including the IT services industry in India by 2020. In particular, the strategy should focus on enhancing levels of online awareness, knowledge, skills, infrastructure and uptake throughout the industry.

The government is paying particular attention to tourism jobs to ensure that it has the infrastructure and resources necessary to operate effectively online. It has committed substantial resources to development of regional telecommunications infrastructure and regional tourism location and travel attractions in many form-medical, religious, health, education etc., to mention a few.

I am confident that this national policy, which has been developed in close consultation with the industry and the states and territories, will help unlock massive opportunities arising from the tourism industry continue to have an exciting future. I think tourism industry will benefit significantly by utilizing digital technology.

I urge the tourism industry to switch on to the tremendous opportunity afforded by the internet. Further the traditional ways of treating the global community with an "open mind" and heart will go a long way in making India the most preferred country.

I am happy to note that the Conference Director ICCPMS '2017 Professor V. Venkata Ramana devoted significant time and effort to come out with this volume.

I am sure that in the years to come this compilation would be useful for students, faculty, researchers, and practitioners of management in general and Services Marketing in particular.

Heritage

with the most dramatic growth in the number of visitors to its sites in recent years. The National Trust's visitor numbers increased by 10% in 2001, while the English Heritage visitor numbers increased by 12%. The National Trust now has more than 10 million members and 100,000 volunteers, and it has recently announced that it will open up its membership to people aged 16-25. The English Heritage has also seen significant growth in its membership numbers, with over 1.5 million members in 2001.

The National Trust's success can be attributed to its focus on accessibility and education. It has developed a range of educational resources for schools, including interactive displays and audio guides, and it has also launched a new website that allows users to explore its sites online. The English Heritage has also invested in its education programme, with a range of school visits and workshops available across its sites.

Both organisations have also been successful in their efforts to promote heritage tourism. The National Trust has developed a range of products and services to support tourism, including guided tours, self-guided trails, and heritage-themed events. The English Heritage has also invested in its tourism infrastructure, with a range of visitor centres, gift shops, and restaurants available across its sites.

In conclusion, the National Trust and English Heritage are two of the most successful heritage organisations in the UK. They have both demonstrated a commitment to preserving our cultural heritage and making it accessible to all. Their success is a testament to the power of heritage tourism and the importance of protecting our shared history for future generations.

heritage tourism in 2001, totaling 7.1 million tourist visits. This figure represents a significant increase from 2000, when 6.5 million tourist visits were recorded. The National Trust and English Heritage are two of the most popular heritage organisations in the UK, with over 10 million members between them. The National Trust's visitor numbers increased by 10% in 2001, while the English Heritage visitor numbers increased by 12%. ABSTRACT

Dr. Barbara Klemm, Professor of Professional Ethics, Chair of Corporate Governance, University of Regensburg, Germany

A theoretical examination of environmental finance techniques

2. Environmental Tourism and Ecological Integrity

to fulfill the ecological role of tourism requires the most advanced studies of how environmental tourism can benefit both the environment and the local community. In this section, we will first introduce the concept of environmental tourism and its relationship with ecological integrity. Second, we will discuss the relationship between environmental tourism and ecological integrity by examining the relationship between environmental tourism and the local community. Finally, we will propose some recommendations for environmental tourism development.

2.1. Definition of Environmental Tourism

Environmental tourism is a type of tourism that emphasizes the protection of the environment and the promotion of sustainable development. It is a form of tourism that aims to protect the environment and promote sustainable development through the use of environmental education, environmental awareness, and environmental participation.

The concept of environmental tourism has been around for several decades, but it has only recently gained popularity. This is due to the increasing concern over the impact of tourism on the environment and the desire to develop more sustainable forms of tourism.

Environmental tourism is a type of tourism that emphasizes the protection of the environment and the promotion of sustainable development. the first time in history that the majority of the world's population lives in countries where the majority of the population is poor. This is a major challenge for the international community, and it requires a concerted effort to address the root causes of poverty and inequality.

Approaches to poverty reduction and sustainable development

The approaches to poverty reduction and sustainable development have evolved over time. In the early days of the United Nations, the focus was primarily on economic growth and industrialization. However, as the negative impacts of this approach became more apparent, there was a shift towards a more holistic and sustainable approach. This shift was driven by a recognition that economic growth must be sustainable and that poverty reduction must be achieved through a combination of economic, social, and environmental factors. The World Commission on Environment and Development, also known as the Brundtland Commission, played a key role in this shift, emphasizing the need for sustainable development that meets the needs of the present without compromising the ability of future generations to meet their own needs.

Today, the focus is on poverty reduction and sustainable development. This involves addressing the root causes of poverty, such as lack of access to basic services, lack of education, and lack of opportunities. It also involves promoting sustainable development, which includes issues such as climate change, energy efficiency, and resource management. The World Bank, UNDP, and other international organizations play a crucial role in this process, providing technical assistance, funding, and policy advice to developing countries.

In addition to these international efforts, there are also local and grassroots approaches to poverty reduction and sustainable development. These include community-based organizations, local governments, and NGOs. These entities work directly with communities to identify their specific needs and develop tailored solutions. They often focus on issues such as microfinance, local agriculture, and sustainable energy. By working at the local level, these organizations can have a more direct impact on the lives of individuals and families.

Overall, the global effort to reduce poverty and promote sustainable development is complex and multifaceted. It requires a coordinated effort from governments, international organizations, and civil society. It also requires a commitment to sustainable development, which means addressing the root causes of poverty while protecting the environment and ensuring that future generations will have a better life than we do.

Conclusion

The global effort to reduce poverty and promote sustainable development is a complex and multifaceted task. It requires a coordinated effort from governments, international organizations, and civil society. It also requires a commitment to sustainable development, which means addressing the root causes of poverty while protecting the environment and ensuring that future generations will have a better life than we do.

5.2 Economic, Social and Environmental Contexts

and environmental tourism services may be able to provide tourists to rural areas with more opportunities to engage in local tourism activities, with the dual advantage of conserving tourism in its most original form and protecting the natural environment. Environmental tourism services focusing on a particular aspect of society or culture such as a specific cultural community or the environment itself can also bring tourists both physically and financially to the area without impacting the social and environmental aspects of society and environment. Tourism is also a significant source of employment and economic development for a range of industries, but it can also have a negative impact on both physical and environmental resources through its products both social and material impacts. Tourism may be either a tool to improve living standards, facilitate economic development, or contribute to environmental degradation. Last, the pattern of tourism impacts on the environment and management are central to sustainable development principles.

5.2.1 Economic, Social and Environmental Significance and Context

The key theme here is how to bring about sustainable development with minimum disruption, so as to benefit the wider community and minimize environmental degradation and damage.

4.1 Dissemination and Conclusion

This case study of sustainable development from other countries and regions provides a model for the implementation of sustainable development in the global context. The study highlights the importance of sustainable development in the global context, and the need for international cooperation and exchange of best practices. The study also emphasizes the importance of sustainable development in the context of climate change, and the need for international cooperation and exchange of best practices. The study also emphasizes the importance of sustainable development in the context of climate change, and the need for international cooperation and exchange of best practices.
